

1 Generated network based on grid topology

2 Notes

- Black arcs are part of the base, grid topology.
- Red arcs are additional, randomly generated.
- $C = x$ along arc: overall capacity of arc is equal to x .
- $F = y$ along arc: fixed cost of arc is equal to y .
- $V = z$ along arc: variable cost of arc is equal to z .
- Capacities and variable costs are not differentiated between commodities.
- Circular nodes are transit nodes.
- Rectangular nodes are source ($flow > 0$) or sink ($flow < 0$) nodes for stated commodities.
